Software Engineer

- Back end engineer in **Java** with 4 years of experience
- Passionate about **Linux/UNIX** systems and **FOSS**; experienced in maintaining a Linux server
- Looking for a **dynamic** company where ICs are **autonomous** and close to the **product**
- Outside of work, learning **Go** and writing Neovim plugins in **Lua**. Also doing some home networking labs.
- Dual **French Irish citizen**. Fully French/English bilingual.

EXPERIENCE

Badakan

Feb 2024 – Today (*2 year*)
Backend engineer — *Paris, France*

- Startup environment. **SaaS platform** for HR in hotels and restaurants. Clients include large Parisian palaces
- Multitenant architecture, single monolith built with **Java 25** and **MongoDB**. Team worked with continuous deployments. App deployed in **EKS** and artifacts saved in **s3**
- Helped develop and design new features that unlocked our biggest client
- Extensive MongoDB work including: optimising queries, workflows and indexing strategies. Used a **covered query** (query fully resolved with an in-memory index) to solve bottlenecks.
- Resolved production incidents. Reduced **memory** footprint and **latency** of our most called endpoints. Reduced **90p** latency by **10x**
- Resolved distributed concurrency issues: fixed incorrect application-level DB locks. Ensured backward/forward API compatibility for **zero down time** deployments.
- Improved the observability stack. Added custom spans and metrics with attributes using **Opentelemetry** libraries. Gave us better insight how our customers use the application. Allowed us pinpoint performance problems ahead of time.

Norsys

1 year 7 months

Software engineer at **Decathlon** — June 2022 - August 2023

- Greenfield **micro service** in **Java 17, Spring Boot, Postgres and Kafka**. Service that connects second hand warehouses to the ecommerce store front
- **Event Driven** system. Service reacts to inventory changes in the warehouse and orders made on the store front. Makes API call to other services and published events in Kafka topic accordingly.
- 3 person team, I worked on the entire app life cycle, put in place the entire stack.

Software engineer — Jan 2022 - June 2022

- Worked inside the software agency, the customer Aristid, needed e-catalogues for supermarkets
- Made a major migration from **manual SQL queries** to an **ORM** (*from Spring JDBC to Spring JPA*)

EDUCATION

Trinity College Dublin

Dublin, Ireland
Bachelor of Science in Computer Science: ***II.I Honours*** — *2016 – 2020*

- **First class Honours** in 1st, 2nd and 3rd year

PROJECTS

Undergraduate research project — *C*, ***QUIC***, *Cmake* — Trinity College Dublin

Last semester project to port the **QUIC** transport protocol to an embedded device. Had to read and synthesise research papers from the last 5 years on the topic. Wrote a report about my learning and attempt.

Technical Skills

Languages	:	**Java** *(Strong)*, **Bash** *(Strong)*, **Go** *(Proficient)*, **C** *(Proficient)*, **Lua** *(Proficient)*
Frameworks	:	Spring Boot
Technologies	:	**Linux/Debian**, Opentelemetry, Datadog, LaTeX, MongoDB Atlas, Kafka
Databases	:	**MongoDB**, **PostgreSQL**
Tooling	:	**Git** *(Strong)*, IntelliJ, Docker, Neovim
